

## NODAL EXCHANGE ELECTRONIC TRADING GUIDE

Nodal Exchange Participants can electronically access the Nodal markets via a choice of market-leading front-end trading screens: Trayport, Trading Technologies (TT), and CQG. Each screen connects to Nodal's T7 Trading Architecture, providing visibility and execution capabilities across Nodal Exchange's Power, Natural Gas, and Environmental futures products.

In order to gain access to a front-end trading screen, the prerequisites listed below must be in place:

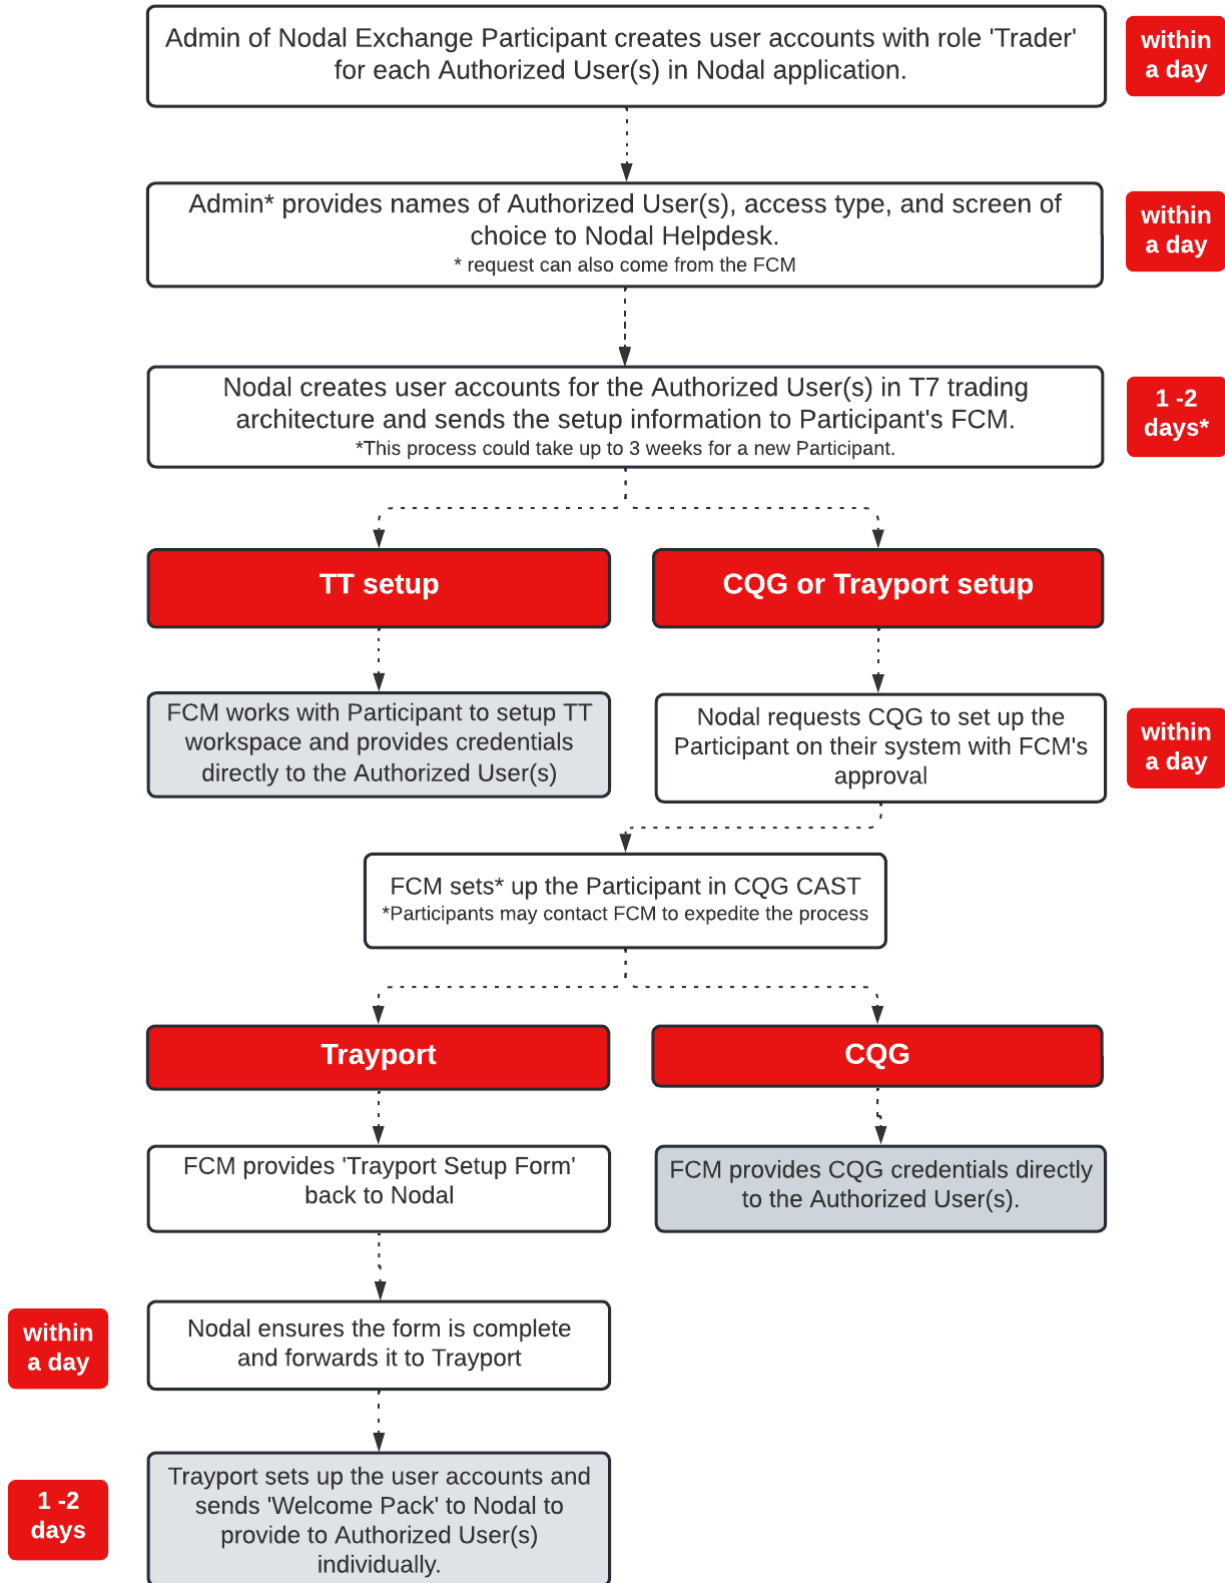

- The request must come from an approved Participant of Nodal Exchange
- The Nodal Exchange Authorized User must be set-up as a 'trader' user within one of the Participant's trading accounts in the Nodal application
- The FCM related to the Participant must be able to accommodate screen trading via the chosen screen
  - Please contact the FCM directly to ensure they support trading via the chosen screen

Once these prerequisites are fulfilled, the request for screen access needs to be sent to Nodal Helpdesk ([helpdesk@nodalexchange.com](mailto:helpdesk@nodalexchange.com)) with the trader(s) names, type of access (view only / trading), and the name of the desired screen platform.

As soon as Nodal Helpdesk receives an email with the necessary information, the set-up process will begin. For reference, a workflow diagram is provided below laying out the steps involved and estimated time it will take to complete the set-up of either a trading user or a view-only user on each screen.

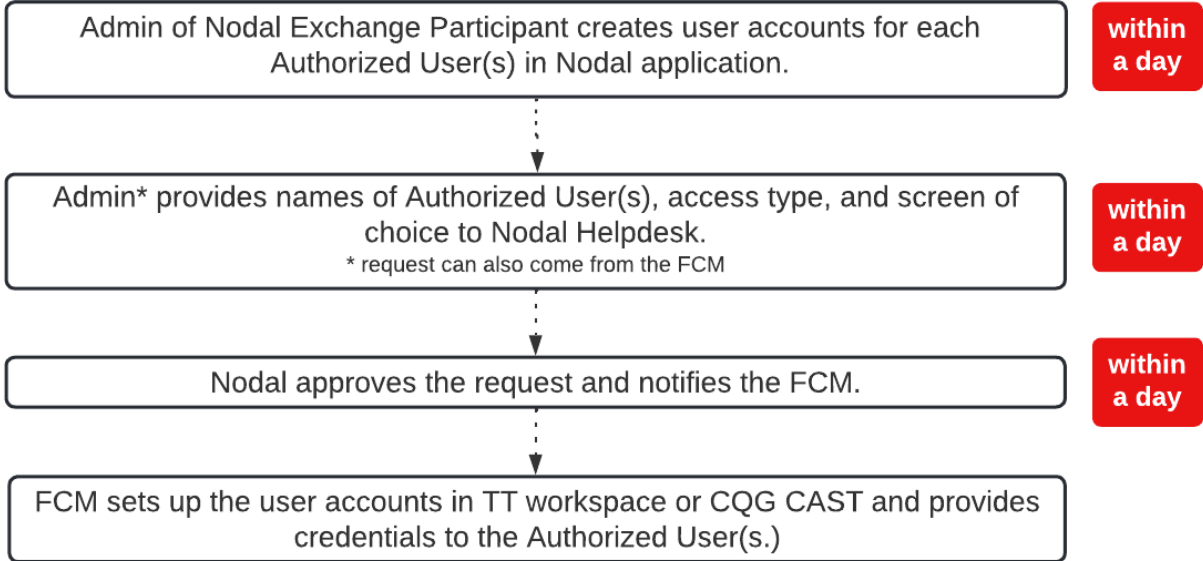

*\*\*\*Please note that Nodal has no visibility over the set-up requirements of the FCM, as such, the trader may directly follow up with their FCM to inquire about, or expedite the process.*
